

YOUR Token

Not ours. Not theirs. It's YOURS.

Abstract / Introduction

The crypto world has seen countless projects where developers and owners hold massive amounts of tokens. This creates fear, uncertainty, and doubt — what if they dump their bags, abandon the project, or secretly control supply? The community is left powerless.

YOUR Token is different. Our vision is simple: a project where the community has full control. No privileged wallets, no hidden reserves — even the owner can only acquire YOUR Token by buying it directly, shoulder to shoulder with the community.

To sustain growth, a small portion from each transaction funds marketing (2%) and team expenses (1%), ensuring long-term stability without unfair insider advantages. This system creates fairness, transparency, and true decentralization from day one.

Not ours. Not theirs. It's YOURS.

Problem Statement

The cryptocurrency market is filled with projects that claim to be “community-driven,” yet behind the scenes, the reality is very different. In most cases, developers and insiders control massive portions of the token supply. This creates a dangerous imbalance of power where the community carries the risk, and a small group holds the control.

Large pre-mines, presales, and hidden allocations often lead to sudden dumps, market manipulation, and broken trust. Even projects that avoid outright rugpulls still leave holders vulnerable when a small number of wallets hold too much influence.

This cycle of unfair distribution and manipulation has become one of the biggest problems in crypto today — and it is the very problem YOUR Token was created to solve. By removing presales, eliminating hidden reserves, and relying only on transparent transaction fees, YOUR Token ensures that the community stays at the center of the project.

Solution: The YOUR Token Vision

YOUR Token was built as the answer to the unfair practices that dominate the crypto market. Instead of pre-mines, insider allocations, or risky presales, YOUR Token launches with a simple and transparent principle: the community comes first.

From day one, no hidden supply exists in developer or insider wallets. Every holder acquires YOUR Token in the open market under the same conditions — including the founder. The project sustains itself through a fair transaction fee system:

- 2% Marketing Fee funds promotions, listings, and growth.
- 1% Team Fee supports operations, development, and long-term sustainability.
- 2% Burn permanently reduces supply, increasing scarcity and value.

This model creates a cycle where every trade strengthens the project: the community grows, the supply decreases, and resources are directed back into development and visibility. YOUR Token is not just another coin — it is a movement for fairness, transparency, and community ownership.

Not ours. Not theirs. It's YOURS.

Tokenomics

Total Supply: 1,000,000,000,000 (1 Trillion) YOUR Tokens

Supply Distribution:

- 60% — Community (Phased Plan)
 - Phase 1: OG Airdrop – 5%
 - Phase 2: Post-LP Airdrops – 8%
 - Holder & Contributor Rewards – 22%
 - Liquidity Incentives – 5%
 - Public Sale / Fairlaunch Reserve – 20%
- 25% — CEX Listings
- 10% — Partnerships / Reserve
- 5% — Ecosystem Growth

Liquidity Policy:

No liquidity has been added yet. Tokens remain in community distribution until LP creation. Once liquidity is formed, 100% of LP tokens will be burned to ensure trust and immutability.

Transaction Fees:

- 2% Burn — Tokens permanently removed from circulation.
- 2% Marketing — Used fully for campaigns, listings, and community growth.
- 1% Team — Covers operations, development, and essential project costs.

Note: Fees apply only to DEX transactions. For CEX listings, all fees will be permanently removed to comply with exchange requirements.

Roadmap

Phase A — OG Airdrop & Community Build

- Collect wallets, verify participants, and distribute 5% OG allocation.

Phase B — Liquidity Creation & Burn

- Community and partners help create PancakeSwap liquidity.

- 100% of LP tokens burned.

Phase C — Post-LP Airdrops & Growth

- Quests, referrals, and campaigns.
- Reward long-term holders.

Phase D — Exchange Listings

- Apply for CEX listings using the 25% allocation.

Phase E — Community-Led Next Steps

- Future decisions via community voting (utilities, partnerships, burns).

Utility & Use Cases

1. Governance & Community Voting — Holders will shape the project's future decisions.
2. Rewards for Contributors — Active members are rewarded for contributions.
3. Exchange Access & Liquidity — Supported on multiple trading platforms.
4. Deflationary Store of Value — Burn mechanism increases scarcity over time.

Security & Transparency

1. Verified Smart Contract — Deployed on BNB Chain and verified on BscScan.
2. Liquidity Lock & Burn — 100% of LP tokens burned after creation.
3. No Hidden Wallets — No privileged wallets or hidden allocations.
4. Transparent Fees — Marketing and team fees are openly reported.
5. Anti-Rug Philosophy — Designed to eliminate insider dumping.
6. Allocation Wallet Transparency — 10 separate wallets created for each allocation (OG Airdrop, Post-LP, Liquidity, CEX, Partnerships, Ecosystem, etc.) for on-chain traceability.

Team & Community

YOUR Token is built on the principle of community-first ownership. Unlike projects where founders hold large allocations, YOUR Token empowers holders to shape the future.

Community-Driven Model — The community is the backbone of YOUR Token. Growth campaigns, airdrops, and contributions are rewarded directly. Governance and voting will guide future utilities and expansions.

Team Contribution — The core team operates without privileged allocations. Sustainability is supported through the 1% transaction fee, covering operations and development.

Transparency — All allocation wallets are public, and spending is shared openly with the community.
